

ONE SYSTEM INSTEAD OF SPREADSHEETS

Customers, orders, stock and finances – in one place

Kalati is a business management system that runs in the browser: it keeps your customers, orders, stock, purchasing and invoices in one place, and every morning it tells you what needs your attention. It's for you if your trading, distribution or service business has outgrown its spreadsheets but doesn't need a large, expensive ERP system.

- ✓ Browser and mobile
- ✓ Hungarian and English
- ✓ Permissions per module

Why Kalati?

Everything connected

A customer's full history – orders, invoices, tasks – on one record page.

Less manual calculation

Totals, stock, balances due and profit calculate themselves.

It tells you in advance

Overdue tasks, products to reorder, late payments – in a morning email too.

Your data stays yours

Runs in your own separate instance; daily backups and full Excel export.

Only what you need

Switch on only the modules you need; pricing is put together per module too.

Quick move from Excel

Import wizard for customers, products and opening stock.

What it does

Sales	Orders with shipping, cancellations and returns, sales report with monthly charts.
Customer retention	Reorder forecast from the buying rhythm, RFM customer analysis.
Customer relations	Customers, companies, contacts and leads with timelines.
Purchasing	Order suggestions from real consumption, purchase orders, receiving.
Stock	FIFO stock, document-linked movement log, stocktaking, expiry alerts.
Finance	Invoices (szamlazz.hu, Billingo), payments, balances due, reminders.
Work	Tasks with deadlines and recurrence, activities, notifications.
Security	Roles per module, change log, concurrent editing protection.

Try it now

The demo is open without sign-up, with made-up data – it's the same software that runs in production.
